

Generic tree

Binary Search Trees Class - 1

Special class

⇒ BST

→ 5 min

Break

→ uploading tree

class rec...

BST $\rightarrow$ Binary Search Tree

for every
node

↓
property

↓
left val < root val
child.

right
child val > root
val

BST

i/p $\rightarrow$ 100, 50, 200, 70, 20, 250, 150, 1

rukja

root $\rightarrow$ NULL

1 $\rightarrow$ Ruk jao

100, 50, 200, 20, 70, 250, 150, -1
↑ ↑ ↑ ↑ ↑ ↑ ↑
Rank

→ Max / Min of BST

(2) inorder → sorted
first → min
last → max

→ Search in BST

$O(n)$ → Left Right
B.S
↳ $O(\log n)$

90

target = 450

bool → T/F

→ Delete from BST

(200) find

target = 110

- (A) leaf -> 300 -> return
- (B) left -> non-null
right -> null
40

- (c) left -> null
right -> non null

- (d) left -> non null
right -> non-null

100 -> just check
or
just bad
